Workshop series

Bridging innovation to service provision

The present proposal builds on the results of the scientific communication questionnaire, that allowed the identification of key topic areas and knowledge available to be shared among NET4AGE-Friendly participants.

A number of experiences demonstrated how digital solutions are effective in improving QoL and health outcomes for older adults. The present workshop aims at providing a first overview of the experiences available among NET4Age-Friendly participants, that may be of interest to care and cure authorities.

To this purpose, the workshop has been organised jointly between the RSCN, ProMIS and SHAFE networks, and Vigour project, to identify painpoints and bottlenecks that may require a collaborative, interdisciplinary research approach to facilitate the transformations towards smart, sustainable, health and age-friendly communities.

Integrated care: opportunities & challenges

20 April 2022

3.00-5.00 p.m. CEST

https://meet.goto.com/603260589

03.00 Introduction

Maddalena Illario, Carina Dantas, Willeke van Staalduinen

Session 1: Focusing on the opportunity for personalised and integrated solutions.

03.10 *Older adults and caregivers' role in person-centered ICT for AFE.*
