Closing remarks

JOIN US

One of the most expensive climate disasters in the past 40 years is the 2021 flooding in Germany and Belgium, costing approximately EUR 44 billion*.

Join us for an insightful event on flood risk management, featuring expert presentations, interactive discussions, and practical case studies.

The event will showcase what regions and local communities can do to better prepare for these types of crises.

It will also will explore the current state of water security, the evolving risks posed by climate change, and the top local best practices within the EU.
